

FTTH

OPTICAL FIBER INTERNET ACCES

Develop your remote, intranet, inter-company collaborations confidently thanks to your quick equipment and its optimum efficiency. Fiber-optics is your best ally when expanding your network and is what makes the difference with your partners.

QUICK, STABLE AND RELIABLE

FTTH fiber-optics offers a constant quality signal, regardless of the number of simultaneous connections. Its impervious to electromagnetic interferences ensures a very high reliability of the bandwidth and exceptional flow rates, until 100Mb/s, uploading as well as downloading. Information is sent at the speed of light. Voice, sound, files are transmitted almost instantly. It is an ideal speed to carry out your backups. This is the reason why we offer you an off site 1GB SafeFile backup for any FTTH fiber access.

Your advantages

- Quick and reliable Internet access •
- Progressive system •
- SLA Availability •
- Up to 100Mb/s symmetrical •
- Off site backup of 1GB for free •

A TECHNOLOGY ADAPTED TO YOUR NEEDS

Your needs vary and evolve all the time. A fiber-optics Internet access gives you a clear lead over others. In addition to responding to the most demanding uses, it enables to develop your activity, granting you access to new communication technologies. You do not need to change the entire equipment each time you want to speed up. FTTH equipments allow your company to evolve according to your needs.

OFF SITE SAFEFILE BACKUP

Managing your data protection is no longer a headache! This software provided by DFI has been specially created for servers, laptops and workstations and allows you to plan automatic back-ups and remote recovery. Compatible with Windows, Linux and Mac, you can now be protected against any type of IT damage, without interfering with your daily work. Compressed to gain storage space, your encrypted files are transferred to our Data center in Switzerland, via secured Internet access (SSL Connection).

SLA AVAILABILITY

This option allows you to benefit from a totally independent backup ADSL circuit. It is an immediate and automatic solution, which insures you a 99.8% global availability of your network, even in case of fiber acces failure.
